

Assignment : 2

Name : ramchandani nidhi

Enrollment No : 251031003

Subject : AI Automation

Q.1 Lead Management Scenario

Use Case: Automating business leads

Flow:

Google Forms (New Lead Submission) → Google Sheets / CRM (Add Lead) → Gmail (Send Welcome Mail) → Slack (Notify Sales Team)
Scenario Name: Lead Capture Workflow

Ans : Use Case

This scenario is used to automate the process of capturing and managing business leads. When a potential customer submits their details, the system stores the lead, sends a welcome email, and notifies the sales team for follow-up.

Apps Used and Why

Google Forms

Used to collect lead information such as name, email, phone number, and interest.

Google Sheets / CRM

Used to store and manage lead data for tracking and future communication.

Gmail

Used to send a welcome or acknowledgment email to the new lead.

Slack

Used to notify the sales team instantly so they can take quick action.

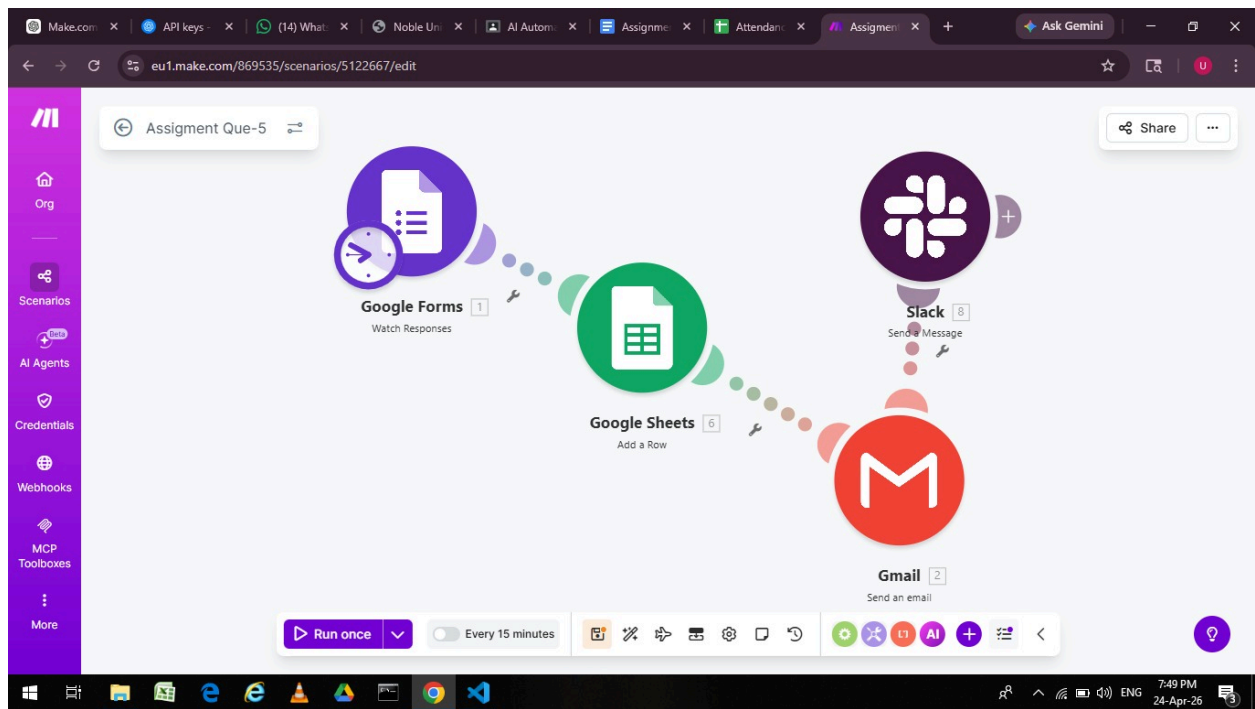

Flow Explanation

Google Forms collects lead details →
Google Sheets / CRM stores the lead →
Gmail sends welcome email to the lead →
Slack notifies sales team.

Result

This automation ensures that no lead is missed and enables quick response from the sales team. It improves efficiency, saves time, and increases chances of conversion.

OutPut :

Q. 2 Social Media Post Automation

Use Case: Auto-share blogs on social media

Flow:

RSS Feed / Website (Watch New Blog Post) →
OpenAI (Generate Caption) → Facebook /
LinkedIn (Create Post)

Scenario Name: Blog to Social Media Automation

Ans : Use Case

This scenario is used to automatically share new blog posts on social media platforms. Whenever a new blog is published, the system generates a caption and posts it on platforms like Facebook and LinkedIn.

Apps Used and Why

RSS Feed / Website (Watch New Blog Post)

Used to detect when a new blog post is published on the website.

OpenAI (Generate Caption)

Used to create an engaging and relevant caption for the blog post.

Facebook / LinkedIn

Used to automatically publish the post along with the generated caption.

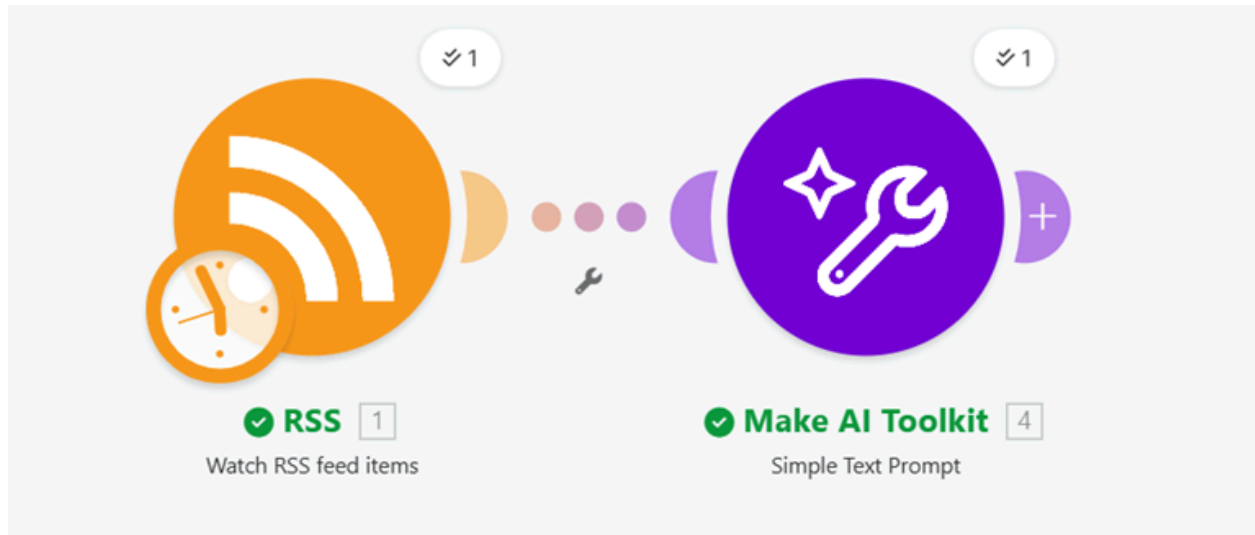

Flow Explanation

RSS Feed / Website detects new blog post →
OpenAI generates caption →
Facebook / LinkedIn creates and publishes post.

Result

This automation saves time by eliminating manual posting. It ensures consistent social media activity and helps increase audience engagement.

OutPut :

Make AI Toolkit

Bundle 1: (Collection)

- Text: Write a short engaging social media caption for this YouTube video.

Title: 25 April 2026
Description:

Add 3-5 hashtags and make it attractive.

OUTPUT

Bundle 1: (Collection)

- Answer: Countdown to 25 April 2026: what happened, and what it means? Watch the highlights and insights.
#25April2026 #FutureHighlights #MustWatch #WatchNow

Module execution token usage: (Collection)

METADATA

- Empty

CREDIT USAGE

Credits used for: (Collection)

- Operation cost: 1 credit
AI tokens: 0.12 credits

Q.3 Urgent Email Filter Scenario

Use Case: Detect urgent mails

Flow:

Gmail (Watch Emails) → Filter: Subject contains
"Urgent" → Slack / Gmail (Notify
Manager)

Scenario Name: Urgent Email Alert

Ans : Use Case

This scenario is used to automatically detect urgent emails and notify the manager. When an email with the word "Urgent" in the subject is received, the system immediately sends a notification.

Apps Used and Why

Gmail (Watch Emails)

Used to monitor incoming emails continuously.

Filter (Make.com)

Used to check the condition (Subject contains “Urgent”).

Slack / Gmail

Used to notify the manager instantly about the urgent email.

Flow Explanation

Gmail receives email →

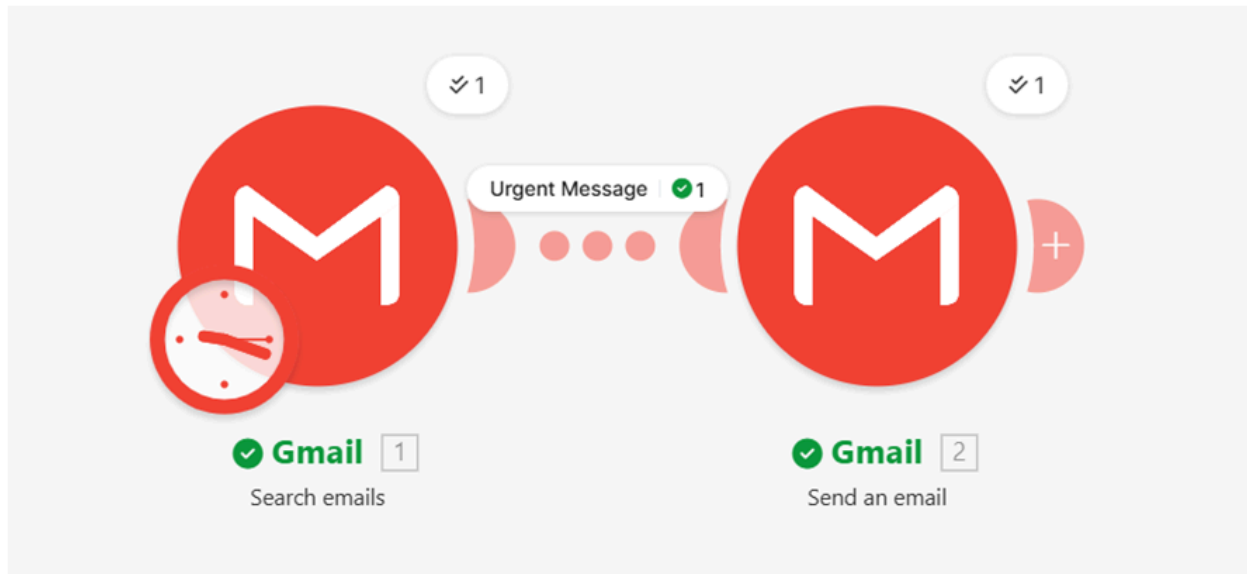

Filter checks if subject contains “Urgent” →

Slack / Gmail sends notification to manager.

Result

This automation ensures that important emails are not missed. It helps managers take quick action on urgent matters and improves communication efficiency.

OutPut :

Q.4 8) E-commerce Order Workflow

Use Case: Order processing

Flow:

Shopify / Form (New Order) → PDF Generator
(Create Invoice) → Gmail (Send Invoice) →

Slack (Notify Warehouse)

Scenario Name: Order Processing Automation

Ans: Use Case

This scenario is used to automate the order processing system in an e-commerce business. When a new order is placed, the system generates an invoice, sends it to the customer, and notifies the warehouse for order fulfillment.

Apps Used and Why

Shopify / Form (New Order)

Used to capture new customer orders with details like product, quantity, and customer information.

PDF Generator

Used to automatically create an invoice for the order.

Gmail

Used to send the invoice to the customer via email.

Slack

Used to notify the warehouse team so they can prepare and dispatch the order.

Flow Explanation

Shopify / Form receives new order →
PDF Generator creates invoice →
Gmail sends invoice to customer →
Slack notifies warehouse team.

Result

This automation speeds up order processing and reduces manual work. It ensures accurate invoicing and quick communication with the warehouse team.
