

Assignment : 1

Name : Ramchandani Nidhi

Enrollment no.: 251031003

Subject : AI Automation

Q.1 Student Admission Form Automation

Use Case: Automating college
admission inquiries

Flow:

Google Forms (Watch Responses) →
Google Sheets (Add Row) → Gmail
(Send Confirmation
Email) → Gmail / slack (Notify
Admission Team)

Scenario Name: Student Admission
Workflow

Ans : Student Admission Form
Automation:-

Scenario Name: Student Admission
Workflow
Use Case

This scenario is used to automate college admission inquiries. When a student fills the admission form, the system automatically stores the data and sends confirmation to the student and notification to the admission team.

Apps Used and Why
Google Forms

Used to collect admission details from students like name, email, course, and phone number.

Google Sheets

Used to store student data automatically in a spreadsheet for record and management.

Gmail

Used to send confirmation email to the student that their admission form has been received.

Gmail/Slack

Used to notify admission team so they can contact the student and process admission.

Flow Explanation

Google Forms collects student data →

Google Sheets stores data →

Gmail sends confirmation to student →

Gmail/Slack notifies admission team.

Result

This automation saves time, reduces manual work, and ensures quick response to students.

Q.2 Attendance Alert Scenario

Use Case: Alert students with low attendance

Flow:

Google Sheets (Watch New Row) →
Filter: Attendance < 75% → Gmail
(Send Warning Email)

Scenario Name: Low Attendance Alert System

Ans :

Use Case

This scenario is used to automatically alert students who have low attendance. When attendance data is updated, the system checks the percentage and sends a warning email to students whose attendance is below 75%.

Apps Used and Why

Google Sheets

Used to store and manage student

attendance data such as name, email, and attendance percentage.

Filter (Make.com)

Used to check the condition (Attendance < 75%) and allow only low-attendance records to pass through the workflow.

Gmail

Used to send warning emails to students informing them about their low attendance.

Flow Explanation

Google Sheets (Watch New Row / Updated Row) →

Filter (Check if Attendance < 75%) →

Gmail sends warning email to student.

Result

This automation helps teachers quickly identify students with low attendance and notify them instantly. It reduces manual checking, saves time, and improves student awareness and attendance tracking.

OutPut:

Attendance Alert

Roll no	Name	Email	Attendance<75
1	riya	r.n.goswami002@gmail.com	87%
2	ranjan	ranjankatira007@gmail.com	74%
3	aayushi	aayuaparnathi@gmail.com	69%

Q.3 Support Ticket Classification

Use Case: Automatically route customer complaints

Flow:

Gmail (Watch Emails) → OpenAI / AI
Text Classifier (Classify Issue) → Router

Route 1

If Billing Issue → Gmail (Notify Billing Team)

Route 2

If Technical Issue → Gmail / Slack
(Notify Tech Team)

Route 3

If General Query → Customer Support
Team Notification

Scenario Name: AI Support Ticket

Router

Ans :

Use Case

This scenario is used to automatically classify customer support emails and route them to the correct department. When a customer sends a complaint, the system identifies the issue type (billing, technical, or general) and forwards it to the appropriate team.

Apps Used and Why

Gmail (Watch Emails)

Used to receive and monitor incoming customer support emails.

OpenAI / AI Text Classifier

Used to analyze email content and classify the type of issue (Billing, Technical, or General Query).

Router (Make.com)

Used to create multiple paths based on the classified issue.

Gmail / Slack

Used to notify the respective team (Billing, Technical, or Customer Support).

Flow Explanation

Gmail receives customer email →

AI Classifier analyzes and identifies issue type →

Router splits flow into multiple routes:

- **Route 1:** If Billing Issue → Gmail notifies Billing Team
- **Route 2:** If Technical Issue → Gmail / Slack notifies Technical Team

- **Route 3:** If General Query →
Customer Support Team is notified

Result

This automation ensures that customer issues are quickly categorized and sent to the correct team without manual effort. It improves response time, reduces workload, and increases customer satisfaction

Q.4 Weekly Report Automation

Use Case: Send weekly sales report

Flow:

Scheduler (Every Monday 9:00 AM) →
Google Sheets (Fetch Sales Data) →
OpenAI (Generate
Summary) → Gmail (Send Report)

Scenario Name: Weekly Sales Report
Scheduler

Ans :

Use Case

This scenario is used to automatically generate and send a weekly sales report. Every Monday morning, the system collects sales data, creates a

summary, and emails the report to the concerned team.

Apps Used and Why

Scheduler (Make.com)

Used to run the automation automatically at a fixed time (Every Monday at 9:00 AM).

Google Sheets

Used to store and fetch weekly sales data for analysis.

OpenAI (Generate Summary)

Used to analyze the sales data and generate a clear and concise summary report.

Gmail

Used to send the final sales report to managers or team members.

Flow Explanation

Scheduler triggers every Monday at 9:00 AM →

Google Sheets fetches weekly sales data →

OpenAI generates summary of the data →

Gmail sends the report via email.

Result

This automation removes the need for manual report creation. It saves time, ensures accuracy, and provides timely updates to the team.
